

Student A

My free drawing is a piece of artwork. I used transformations to create something that can be used for a wallpaper or just to look at. I rotated a couple of multi colored quadrilaterals to form my piece. First I made a hexagon. Then I placed a point outside of my hexagon. Next I marked that point as a center, while doing that I rotated it around 60 degrees until it connected with the other side. That is how I got my beautiful drawing.

Student B

The picture I drew today is a piece of art I wanted it to look like as if you were a sky diver and you were coming down on a building. How I did it was I made some shapes and I rotated them 45 degrees to make it look like the guy was spinning very fast.

Student C

This design was used as a logo for hopefully my new photography business later in life. With this logo I used a reflection of a triangle, followed by seven 45 degree rotations. I used a lot of color because color is the most important thing about a logo. If there is no color then people won't notice it. Then if people don't notice it they won't come to your business.
