Using Scientific Notation to Express Distances in Space

<http://www.idahoptv.org/ntti/nttilessons/lessons2000/iau.4.html>

This website gives a chart containing the names of the planets and the distances from the sun expressed in miles.

<http://www.exploratorium.edu/ronh/solar-system/>

This website has information that would be helpful for extensions of this lesson, with information on the stars and distances expressed in light years.

<http://projects.ex.ac.uk/trol/scol/index.htm>

This website offers online calculators in which students can type in information and click on “calculate” to figure a variety of math problems, including fractions, percents, and distances expressed in several ways.

<http://www.websters-online-dictionary.org/definition/>

This website offers definitions that may be helpful when looking for words that do not appear in the textbook glossary.
