

**Let's Play**

**Pick Three Lotto!**

**OR NOT!!**

**Blue Ribbon**

**Probability**

**Presented**

**by:**

**Bobbie Gelpi**

**Jennie Leonard**

**Julia Moreland**

**Scott Starcher**

**Objectives:**

**Students will discover the difference in the probability of winning versus the probability of losing in a random 3 digit number**

**Students will create frequency distribution tables to determine difference in experimental probability and theoretical probability.**

**Students will calculate experimental probability given data.**

ESQ'S

**MA.7.2.13 represent and solve real world problems appropriate for 7th grade using multiple strategies**

**MA.7.5.1 determine experimental and theoretical probability of an event using appropriate technology**

**MA.7.5.2 construct sample spaces by listing, tree diagrams, and frequency distribution tables to determine permutations and combinations.**

**Materials**

**Paper, pen, tootsie rolls,  
Work record sheet,  
random number generator  
or TI-83 or TI-84,  
“grand prize”.**

**Student calculators are  
optional**

**Day 1**

**Procedures:**

# Administer pre-test

1. Pass out 20 tootsie rolls to each student
2. Ask each student to write down a 3 digit number and put pens down
3. Teacher will use TI-84 to produce 3 digit number
4. Students will record results on record sheet
5. Play one round to make sure all students understand procedure
6. Teacher will collect house winnings or pay out winnings
7. Repeat steps 2-5 – 19 more times
8. Complete record sheet and answer conclusion questions

**Day 2**

- **Construct frequency chart**
- **Calculate probability for winning and probability for losing using the formula:**

$$\frac{\text{Number of particular response}}{\text{Total number of rounds}}$$

- **Teacher will use individual students' frequency charts to calculate class' probabilities**
- **Teacher will explain difference between experimental and theoretical probabilities**
  - **Share theoretical probability of this particular situation**  
**Theoretical  $1/10 * 1/10 * 1/10 = 1/1000$  and compare with class experimental results**
  - **Administer post-test**

# The Pre-test

**The mean  
score is...**

**250%**

**Everyone gets  
Tootsie Rolls**

**The**

**Data sheet**

# Pick Three – Day 1

| Play | Student 3 digit # | Random # | Win or Loss | Total candies |
|------|-------------------|----------|-------------|---------------|
|      |                   |          |             |               |
|      |                   |          |             |               |
|      |                   |          |             |               |
|      |                   |          |             |               |
|      |                   |          |             |               |
|      |                   |          |             |               |
|      |                   |          |             |               |
|      |                   |          |             |               |

1. How many tootsie rolls did you begin with? \_\_\_\_\_
2. How many tootsie rolls did you win? \_\_\_\_\_
3. How many tootsie rolls did you lose? \_\_\_\_\_
4. If you stopped playing, why? \_\_\_\_\_

\_\_\_\_\_

# The Video

# Answering questions

**The Post-test**

**The mean**

**score is...**

84%

**Performance**

**Descriptors**

**Novice**

- 1. Student can predict outcome given enough information.**
- 2. Student can collect and organize data.**
- 3. He/she can recognize situations involving probability.**
- 4. Student can not clearly differentiate between theoretical and experimental probability even when given.**

# Partial Mastery

- 1. Student can predict outcome given enough information.**
- 2. Student can collect, organize, and graphically represent data displays.**
- 3. Student can identify theoretical and experimental probability when given.**

**Mastery**

- 1. Student can calculate experimental probability of losing and experimental probability of winning.**
- 2. Student can collect, organize, graphically represent, and interpret data displays.**
- 3. Student can differentiate between theoretical and experimental probability**

**Above**

**Mastery**

- 1. Student can calculate experimental probability of losing and experimental probability of winning.**
- 2. Student can collect, organize, graphically represent, analyze and interpret data displays.**
- 3. He/she can see a correlation between probabilities of different games of chance but has difficulty determining exact ratios.**
- 4. Student can differentiate between theoretical and experimental probability.**

**Distinguished**

- 1. Student can calculate experimental probability of losing and experimental probability of winning.**
- 2. Student can collect, organize, graphically represent, analyze and interpret data displays.**
- 3. He/she can extend understanding of probability to decision making to other games of chance and defend decisions using said understanding.**
- 4. Student can differentiate between theoretical and experimental probability.**

# ASSESSMENTS

- 1. Students will be observed as they perform probability experiment a.k.a. Pick 3.**
- 2. Students final work will be assessed for completeness, correct calculations and accuracy of short-answer responses.**
- 3. Students pre-test and post-test will be evaluated for level of mastery.**
- 4. Student frequency table will be evaluated for correct construction and completeness.**

**Rubric**

|                                    |  |  |  |
|------------------------------------|--|--|--|
| <b>Score</b>                       | <b>3</b>   | <b>2</b>   | <b>1</b>   |
| <b>Pretest</b>                     | <b>Completed</b>   | <b>Finished but left some questions unanswered</b>                     | <b>Did not take or left most of the questions unanswered</b>               |
| <b>Part one</b>                    |  |  |  |
| <b>Records</b>                     | <b>Every round recorded correctly</b>                                      | <b>Left out one or two rounds OR recorded incorrectly</b>              | <b>Left out three or more rounds OR recorded three or more incorrectly</b> |
| <b>Questions</b>                   | <b>Answered every question completely</b>                                  | <b>Left one answer unanswered</b>                                      | <b>Left two or more questions unanswered</b>                               |
| <b>Calculations on candy tally</b> | <b>Complete and accurate</b>   | <b>Complete with one mistake</b>                                       | <b>Two or more mistakes</b>  |
| <b>Part two</b>                    |  |  |  |
| <b>Frequency chart</b>             | <b>Complete and accurate</b>   | <b>Complete with only one mistake</b>                                  | <b>Not complete or with more than one mistake</b>                          |
